# GE23131-Programming Using C-2024

Question **1**Correct
Marked out of 3.00

Flag question

Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false. Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1 false Sample Input 2 27 77 Sample Output 2 true

Answer: (penalty regime: 0 %)

```
#include <stdio.h>
    int main(){
3
        int a,b,c,d,flag=0;
        scanf("%d%d",&a,&b);
4
5
        while (a>0 && b>0){
6
            c=a\%10;
            d=b\%10;
8
            if(c==d){
9
                flag=1;
10
11
12
            a=a/10;
13
            b=b/10;
14
15
16
        if(flag==1){
17
            printf("true");
18
        }
19
        else{
20
            printf("false");
21
22
        return 0;
23 }
```

	Input	Expected	Got	
	25 53	false	false	
	27 77	true	true

▼ Flag question

In this challenge, we're getting started with conditional statements.

## Task

Given an integer, **n**, perform the following conditional actions:

- · If **n** is odd, print Weird
- If *n* is even and in the inclusive range of 2 to 5, print *Not Weird*
- · If *n* is even and in the inclusive range of *6* to *20*, print *Weird*
- If *n* is even and greater than *20*, print *Not Weird*

Complete the stub code provided in your editor to print whether or not n is weird.

## **Input Format**

A single line containing a positive integer, n.

#### Constraints

· 1 <u><</u> n <u><</u> 100

### **Output Format**

Print Weird if the number is weird; otherwise, print Not Weird.

### Sample Input 0

3

### Sample Output 0

Weird

## Sample Input 1

24

## Sample Output 1

REC-CIS

```
Explanation
Sample Case 0: \mathbf{n} = \mathbf{3}
n is odd and odd numbers are weird, so we print Weird.
Sample Case 1: n = 24
n > 20 and n is even, so it isn't weird. Thus, we print Not Weird.
Answer: (penalty regime: 0 %)
    1 #include <stdio.h>
       int main(){
    2
    3
            int a;
            scanf("%d",&a);
            if(a%2!=0 ){
                printf("Weird");}
            else if(2<=a || a<=5){
    8
                printf("Not Weird");
    9
  10
  11
            return 0;
  12 }
```

Input	Expected	Got	
3	Weird	Weird	
24	Not Weird	Not Weird	

Passed all tests!

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since 3\*3 + 4\*4 = 25 = 5\*5 You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no

**Answer:** (penalty regime: 0 %)
